

RMS = Root Mean of Squares.

$$= \sqrt{\frac{\sum_{i=1}^n a_i^2}{n}} \quad (\text{or}) \quad \sqrt{\frac{\text{norm}(A)^2}{n}}$$

→ Used functions →

Numpy.array → to create
the array $[\text{np.square}(\text{np.norm}(A))] \rightarrow a_i^2$

* $\text{np.array}([a_1, a_2, \dots, a_n]) = \text{data}$.

* Element wise squaring of numpy arrays.

⇒ $\text{data}^{**2} \rightarrow$ elemental squaring.

mean of it = np.mean
of array elem.

⇒ Square root = np.sqrt .

printing it.

np.square [squaring numpy array]
returning the arrays.

or → ~~np.dot~~ ~~A^2~~ $n \times n^T$ (matrix mul)

⇒ $n @ n.T =$ dot product.
